

Hi,

The customer has presented me with a table that has small, pre-printed integers in the top, left corner of each cell of the table.

I want to exclude each of those small rectangles from the region of each cell.

I understand the concept of the Flexilayout Language Exclude function.

Question:

How can I get the coordinates of each table cell, such that I can calculate the small, upper-left rectangle to exclude?

Thx,

M.

COLUMN 1 RESIDENT MUNICIPALITY	COLUMN 2 LOCATION 2	COLUMN 3 LOCATION 3
11	22	33
21	22	23
31	32	33
41	42	43
51	52	53
