

Hi,

Lets start with the FLS:

The table name, in blue, ends with “s”.

In the document def, in FC, it also ends with “s”.

It is when we get to XML output Field Mapping that things start to go sideways. There are three forms with same table name: 1065, 1120S and 1120. They appear as:

[-] [F] Sect-Form-1065	Sect-Form-1065 (auto)
[-] [a] NameAddress	NameAddress (auto)
[-] [a] EmployerIDNbr	EmployerIDNbr (auto)
[-] [a] DateBusinessStarted	DateBusinessStarted (auto)
[-] [a] TotalAssets	TotalAssets (auto)
[-] [a] Depreciation16a	Depreciation16a (auto)
[-] [a] Depreciation16b	Depreciation16b (auto)
[-] [a] OtherDeductionsDescription	OtherDeductionsDescription (auto)
[-] [a] TaxYear	TaxYear (auto)
[-] [a] TaxYearBeginning	TaxYearBeginning (auto)
[-] [a] TaxYearEnding	TaxYearEnding (auto)
[+] [T] Amounts	Amounts (auto)
[-] [a] LineNbr	LineNbr (auto)
[-] [a] Amount	Amount (auto)

[-] [F] Sect-Form-1120S	Sect-Form-1120S (auto)
[-] [a] TaxYearBeginning	TaxYearBeginning (auto)
[-] [a] TaxYearEnding	TaxYearEnding (auto)
[-] [a] NameAddress	NameAddress (auto)
[-] [a] EmployerIDNbr	EmployerIDNbr (auto)
[-] [a] DateIncorporated	DateIncorporated (auto)
[-] [a] TotalAssets	TotalAssets (auto)
[+] [T] Amounts	Amounts1 (auto)
[-] [a] LineNbr	LineNbr (auto)
[-] [a] Amount	Amount (auto)
[-] [a] TaxYear	TaxYear (auto)
[-] [a] AddressLabel	AddressLabel (auto)

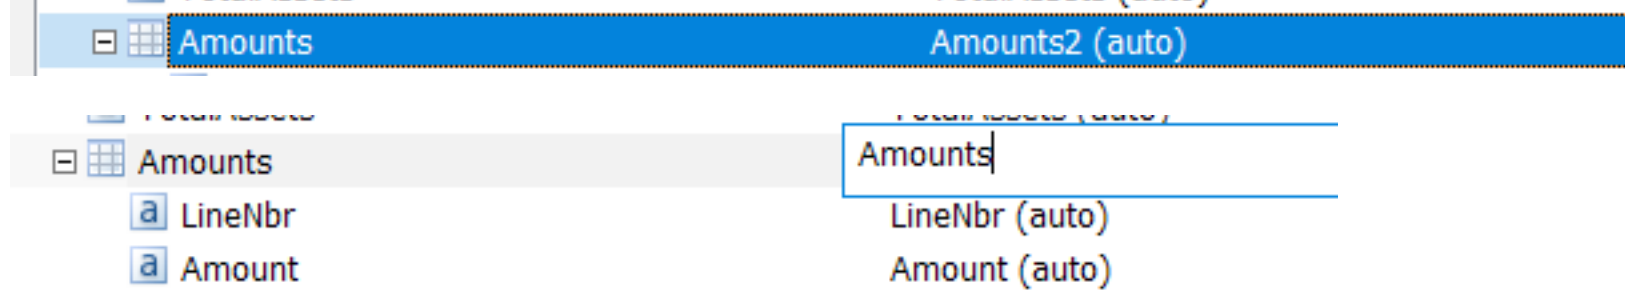

[-] [F] Sect-Form-1120	Sect-Form-1120 (auto)
[-] [a] TaxYear	TaxYear (auto)
[-] [a] TaxYearBeginning	TaxYearBeginning (auto)
[-] [a] TaxYearEnding	TaxYearEnding (auto)
[-] [a] NameAddress	NameAddress (auto)
[-] [a] EmployerIDNbr	EmployerIDNbr (auto)
[-] [a] DateIncorporated	DateIncorporated (auto)
[-] [a] TotalAssets	TotalAssets (auto)
[+] [T] Amounts	Amounts2 (auto)
[-] [a] LineNbr	LineNbr (auto)
[-] [a] Amount	Amount (auto)

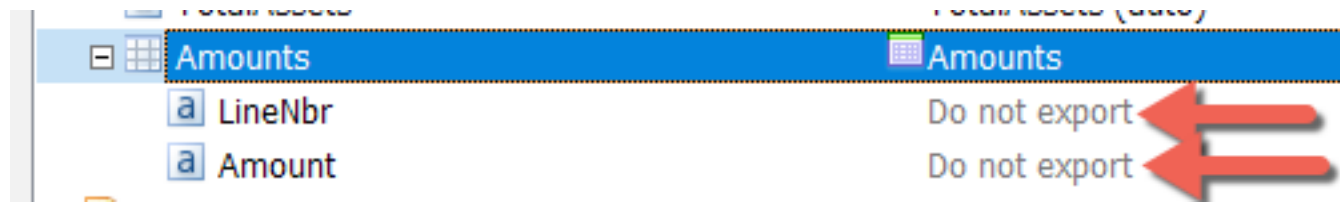

The red and black arrows show the standard auto-increment behavior that we see many places when ABBYY detects duplicate field names.

So, I clicked the line, so that I could supply my own export field name:

As soon as I hit 'enter', the two sub-fields are marked "Do not export".

Any suggestions?

As far as I can tell, this relates only to tables. Other fields work fine.

Thx,
M.
